I'm a Software Architect and Technical Leader with a strong engineering background and a hands-on approach to software development.

My focus is on building scalable systems, making sound architectural decisions, and helping teams deliver high-quality software. I enjoy working on complex technical challenges, balancing long-term maintainability with practical business needs.

Throughout my career, I've moved between engineering, architecture, and leadership responsibilities, which allows me to bridge the gap between technical details and strategic direction.

I'm interested in long-term partnerships where I can contribute to architecture, mentor engineers, and help organizations build reliable, sustainable software.

Main Areas of Expertise

- ☐ **Software Architecture** & **System Design** - designing systems that are scalable, maintainable, and resilient, whether it's a single application or a distributed platform.
- ☐ **Backend Engineering** & **Distributed Systems** - building APIs, services, integrations, and the infrastructure needed to support complex applications, no matter the language.
- ☐ **Technical Leadership** & **Mentoring** - helping engineers grow, facilitating collaboration, and creating environments where teams can do their best work.
- ☐ **Engineering Strategy** & **Delivery** - turning business goals into technical plans, setting priorities, and helping teams deliver successfully.
- ☐ **Modernizing Existing Systems** - improving legacy applications, reducing technical debt, and making systems easier to evolve over time.
- ☐ **Product Development** - taking ideas from early concepts and prototypes through implementation and long-term development.
- ☐ **Software Quality** - promoting testing, code reviews, and engineering practices that keep software reliable and maintainable.
- ☐ **Data & Persistence** - designing data models, databases, and persistence strategies that support both current and future needs.
- ☐ **Infrastructure & Operations** - working with Linux environments, automation, observability, and production systems.
- ☐ **Technical Decision-Making** - evaluating trade-offs, managing risks, and finding pragmatic solutions to complex problems.

Technical Stack

Software Architecture & Engineering

- [ ] Software architecture, domain-driven design (DDD), system design, microservices, API design, legacy modernization, and technical debt management.
- [ ] Distributed systems, asynchronous processing, service integration, and architectural trade-off analysis.

Backend Engineering

- [ ] **TypeScript / Node.js** - backend application development, NestJS, API design, and modular application architecture.
- [ ] **Java** - enterprise backend solutions and scalable APIs.
- [ ] **PHP** - extensive professional experience, including modern PHP and Symfony.
- [ ] **Go** - backend microservices, HTTP APIs, CLI tools.
- [ ] **Rust** - systems programming and exploration of performant, memory-safe software.

Frontend Engineering

- [ ] **React, Next.js, Vite** - modern frontend applications and TypeScript-based development.
- [ ] HTML, CSS, and frontend architecture.

Data & Persistence

- [ ] Relational databases: PostgreSQL, MySQL.
- [ ] NoSQL and caching: MongoDB, Redis.
- [ ] Data modeling, persistence strategies, and database architecture.

Messaging & Integration

- [ ] RabbitMQ, Kafka, asynchronous communication, event-driven architectures, and message-based integration.

Cloud, Infrastructure & Delivery

- [ ] Google Cloud Platform (GCP), Google Kubernetes Engine (GKE)
- [ ] Docker, Linux/Unix, Nginx, and reverse proxies.
- [ ] Nix, Nix Flakes, devenv, GitHub Actions, and CI/CD automation.

Observability & Reliability

- [ ] Prometheus, Grafana, OpenTelemetry.
- [ ] Metrics instrumentation, service monitoring, troubleshooting, and production readiness.

Testing & Engineering Quality

- [ ] Unit, integration, and component testing; testability and dependency isolation.
- [ ] Test-driven development (TDD), behavior-driven development (BDD), and code reviews.

Projects (excerpt)

Available in public domain, with source code

- [ ] **CV-Platform** - Go-based, microservice-oriented CV and resume analyzer with a React SPA and optional AI integration. Demonstrates backend engineering, service integration, and practical AI application development.
- [ ] **µRetro** - TypeScript-based team retrospective board exploring real-time collaboration and WebSocket communication between multiple clients.
- [ ] **php-roguelike** - ADOM-inspired command-line roguelike game built in PHP as an exploration of game mechanics and terminal-based application development.

Enterprise work over the years, w/o source code

- [ ] **Sabre Developer Hub** - Main role in the replatforming of a developer portal, covering architectural design, system design, full-stack implementation, and deployment to Google Cloud Platform (GCP).
- [ ] **Sabre Spark** - Contributed to the development and maintenance of a corporate-wide design system, including shared UI components and end-to-end testing.
- [ ] **Sabre Documentation MCP** - Proposed, designed, implemented, and deployed an internal Model Context Protocol (MCP) server to make organizational documentation accessible to AI-powered tools. The initiative gained broad internal adoption and was extended to external tooling and multiple AI agents.
- [ ] **AI-SDLC Initiative** - Selected as a leader in the organization's AI-driven software development lifecycle initiative, driving multiple initiatives focused on integrating AI into engineering workflows.
- [ ] **ngp-toolbox** - Contribute to a Go-based CLI tool used extensively within the organization, supporting its continued development alongside a small group of maintainers.

Experience and past employment (notable)

09.2022 - now **Senior Software Engineer Team Lead** @ *Sabre*

- Tech Lead for internal Sabre Team in multiple technologies: Java, PHP, TS
- Leadership and mentoring of Sabre internal team.
- Making a change in docs-as-code approach across the entire organization.
- Leading public facing Sabre's Developers Platform - Developer Hub..

11.2021 - 10.2022 **Leader of PHP Unit** @ *TheCodest*

- Working with Sales and Recruitment Team in terms of balancing allocation needs
- Managing distributed teams along with shaping and delegating roles across multiple projects
- Launching ongoing recruitments processes and managing them
- Preparing reports (both financial and technical) for Clients
- Full engagement with Marketing Team in terms of company image building
- Leading two internal projects with dedicated development teams
- Managing P&L of Business Unit
- Working closely with Clients on all steps

05.2021 - 08.2021 **Senior PHP Developer** @ *Equiniti LTD*

- Development of new features in PHP microservice application (Laravel & Symfony)
- Managing client's expectations and offering best technical solutions to fit the requirements
- Managing bug reports, analyzing them and distributing work to the development team
- Taking care of code quality (via code review process) and architectural consistency of the project

08.2020 - 05.2021 **Technical Advisor, Team Coordinator, IT Consultant** @ *in6 Solutions*

- Managing and improving technology and operational processes for B2B customers
- Proposing and implementing IT solutions for Fintech and ECommerce businesses.
- Managing external teams of developers, including motivating and monitoring their work on an ongoing basis
- Managing IT company risks and identifying potential problems before they occur
- Conducting product workshops and introducing customers to DDD and BDD methodologies, along with designing applications in PoC or MVP form
- Development of business functions of applications written in PHP and TypeScript

06.2020 - 11.2020 **Web & Mobile Team Leader** @ *Ready4S LTD*

- Ongoing development of KYC/KYB applications in SaaS model
- Day-to-day control of the development team and management of the external client's budget (supporting PM role)
- Managing distributed teams along with shaping and delegating roles across multiple projects
- Working closely with the sales team to increase conversion of leads and prospects to customers, attending sales meetings
- Design and implement a vision for IT department growth, including implementation of new technology and operational processes

11.2018 - 06.2020 **Tech Leader** @ *GMI Group*

- Managing teams of programmers, along with ongoing monitoring of employee development and motivation
- Implementation of new technology processes within a rapidly growing organization
- Managing the company's business risks at the operational level
- Working closely with the sales team to increase conversion of leads and prospects to customers, attending sales meetings
- Conducting product workshops with our customers
- Representing the company at IT industry events

08.2017 - 06.2020 **Senior Backend Developer** @ *GMI Group*

- Ongoing development of new features in multiple projects, specializing in tech-debt and legacy code (Zend Framework, older Symfony framework)
- Creating documentation for legacy projects, along with gathering requirements as a supporting PM role

I agree to the processing of personal data provided in this document for realising the recruitment process pursuant to the Personal Data Protection Act of 10 May 2018 (Journal of Laws 2018, item 1000) and in agreement with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation).
